

NoriCure® CCI

UV Curing Screen Printing Ink for Laminated Plastic Cards

*Innovative Inks &
Functional Lacquers*

NoriCure® CCI is a ready to use screen printing ink for PVC and PETG core films used in card manufacturing.

NoriCure® CCI 944/004

is the most opaque white UV ink for card lamination

Area of Application and General Characteristics

The printed ink layers are flexible and accept offset decoration.

NoriCure® CCI 944/004 has excellent laminating properties with coated PVC overlay films at a temperature of 140 °C (285 °F).

The laminated cards show high peel strength values.

A wide range of silver, gold and effect pigment inks is available.
