

# NoriCard LSI

## Solvent-Based Screen Printing Ink for Laminated Plastic Cards

*Innovative Inks &  
Functional Lacquers*

NoriCard LSI is a one-component screen printing ink for the manufacture of single and multi-layered PVC cards.

### Area of Application and General Characteristics

The printed ink layers are highly flexible and accept offset decoration.

NoriCard LSI has excellent laminating properties with uncoated PVC overlay films at a temperature of 140 °C (285 °F). The laminated films shows high peel strength values.

NoriCard LSI is a user-friendly ink system, formulated free of:

- aromatic solvents
- cyclohexanone
- ketone
- phthalates

### Color shades

The NoriCard LSI metallic ink system includes four standard silver colors of different pigment particle sizes (from fine, middle-coarse to coarse).
