Declaration

Key elements of the Regulation (EC) No. 1907/2006 (REACH) are the registration and authorization of chemical substances.

The responsibility for the registration of substances with the European Chemical Agency (ECHA) within the meaning of the REACH regulation lies with the producer or importer.

Pröll, as manufacturer of mixtures, is only a downstream user and, therefore, not responsible for the registration. For these mixtures a registration is not required. The raw materials used for the manufacture of our products and the chemical substances contained therein however have been registered with the ECHA by our suppliers or the producers. Therefore, we can confirm that our products comply with the legal requirements regarding the REACH regulation.

Within the continuous activities regarding the substances of very high concern (SVHC) new substances are regularly included in the candidate list for authorization.

We generally avoid using these substances as constituent ingredients of our products. Nevertheless, they may be contained in small amounts especially as inevitable traces of contamination. Information regarding SVHC are communicated to commercial and industrial users via the safety data sheets.

To protect the environment as well as the health and safety of our employees and customers, we will investigate alternative raw materials whenever a SVHC is contained in our products. We will substitute the raw material as far as the required technical properties can be remained unchanged with a less hazardous alternative within a reasonable period.

This also applies whenever the classification of a raw material has been changed and the raw material is then affected by the General Exclusion Policy of the European Associations of the Manufacturers of Paint, Printing Ink and Artists' Colours EuPIA and CEPE (see www.eupia.org => General Info About Printing Inks => Exclusion Policy).
